"Crystal structure of neuropsin, a hippocampal protease involved in
kindling epileptogenesis.";
J. Biol. Chem. 274:4220-4224(1999).
J. Biol. Chem. 274:4220-4224(1999).
J. PUNCTION: Suggested to be involved in kindling epileptogenesis and
hippocampal plasticity. Has a strong proteolytic activity against
                                                                                                                                                                                                                                                                                                                                                                                -i- TISSUE SPECIFICITY: Expressed specifically in the limbic system of mouse brain and is localized at highest concentration in pyramidal neurons of the hippocampal CAL-3 subfields.

-i- MASS SPECTROMETRY: NW=26613; METHOD=MALDI; RANGE=29-260.

-i- MASS SPECTROMETRY: NW=26229; METHOD=MALDI; RANGE=33-260.

-i- SIMILARITY: Belongs to peptidase family SI. Kallikrein subfamily.
                                                                                                                                                                                                                                                               fibronectin.
CATALYTIC ACTIVITY: Preferential cleavage: Arg-, Lys-.
ENZYME REGULATION: Strongly inhibited by dIIsopropyl
fluorophosphate, leupeptin and (4-amidinophenyl)methanesulfonyl 1-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          SIMILARITY).

J. PUNCTION: Suggested to be involved in kindling epileptogenesis and hippocampal plasticity. Has a strong proteolytic activity against fibronectin (By similarity).
J. CATALYTIC ACTIVITY: Preferential cleavage: Arg., Lys...
J. SUBCELIGILAR LOCATION: Secreted (By similarity).
J. TISSUE SPECIFICITY: Restricted to hippocampus.
J. SIMILARITY: Belongs to peptidase family S1. Kallikrein subfamily.

-!- FUNCTION: Possible multifunctional protease. Efficiently cleaves bz-phe-Arg-4-methylcoumaryl-7-amide, a kallikrein substrate, and weakly cleaves other substrates for kallikrein and trypsin.

-!- SUBCELULAR LOCATION: Secreted.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              prostate.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Isold=Q9UBX7-2; Sequence=VSP 005402;
TISSUE SPECIFICITY: Expressed in brain, skin and prostate. Isoform
1 is expressed preferentially in brain; isoform 2 in prostate.
SIMILARITY: Belongs to peptidase family S1. Kallikrein subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        N-LINKED (GLCNAC. . .) J. 307:471-479(1995).
-!- CATALYTIC ACTIVITY: Preferential cleavage: Arg-|-Xaa, Lys-|-Xaa.
-!- COFACTOR: Binds I calcium ion per subunit (By similarity).
-!- SUBCELDULAR LOCATION: Extracellular.
-!- TISSUE SPECIFICITY: High levels are seen in the pancreas while lower levels are found in the liver, spleen and thymus.
-!- SIMILARITY: Belongs to peptidase family S1.
                                                                                                                                                                                                                                                                                                                                                                                                             Galîus gallus (Chicken).

-!- CATALYTIC ACTIVITY: Preferential cleavage: Arg-|-Xaa, Lys-|-Xaa.
-!- COPACITOR: Binds 1 calcium ion per subunit (By similarity).
-!- COPACITOR: Extracellular.
-!- SUBCELLULAR LOCATION: Extracellular.
-!- TISSUB SPECITICITY: High levels are seen in the pancreas while lower levels are found in the liver, spleen and thymus.
-!- SIMILARITY: Belongs to peptidase family S1.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             8; Gaps
                                                                                                                                                                                                                                                                                                                                          Wang K., Lytle L., Gan L., Hood L.E.;
Submitted (SEP-1996) to the EMBL/GenBank/DDBV databases.
-!- CATALYTIC ACTIVITY: Preferential cleavage: Arg-|-Xaa, Lys-|-Xaa.
-!- COFACTOR: Binds 1 calcium ion per subunit (By similarity).
-!- SUBCELLULAR LOCATION: Extracellular.
-!- SIMILARITY: Belongs to peptidase family S1.

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Submitted (12-OCT-2000) DOE Joint Genome Institute, Lawrence
Submitted (12-OCT-2000) DOE Joint Genome Institute, Lawrence
Livermore National Laboratory, Livermore, CA 94550
Divoct 12, 2000 this sequence version replaced gi:7458725.
Map and sequence oriented from centromere to q-telomere. BC349142
(CTC-518B2) overlaps BAC BC68745 (CTP-147C22, ACO11483) on the left
from bases 1 to 2,226 of this accession, and overlaps BAC BC692989
(CTD-3187F8, AC063977) on the right from bases 120,922 to 132,323
of this accession. Additional chromosome 19 map and sequence

**NOTE: This is a 'working draft, sequence. It currently consists of 10 contigs. Gaps between the contigs. **are represented as runs of N. The order of the piaces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.

This sequence will be preserved.

**Paralle sequence as soon as it is available and the accession number will be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequencing vector: plasmid; n/a; 100% of reads
Sequencing vector: plasmid; n/a; 100% of reads
Sequencing vector: plasmid; n/a; 100% of reads
Assembly program: Phrap; version 0.990319
Consensus quality: 172841 bases at least Q40
Consensus quality: 173490 bases at least Q30
Consensus quality: 173737 bases at least Q20
Insert size: 150000; agarose-fp
Insert size: 173824; sum-of-contigs
Quality coverage: 13.73x in Q20 bases; sum-of-contigs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The sequence data in this record represents an 'enhanced' version of a Phase 2 submission. Specifically, the indicated order and orientation of each sequence contig has been established using one or more of the following: read-pair
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         data from individual subclones, overlaps with neighboring clones, alignment with available reference sequence (e.g., human), and/or confirmation by PCR testing. In addition, the sequence assembly is based on at least 8X average coverage in Q20 bases and has been reviewed to rule out gross misassemblies, the low quality ends of sequence contigs have been trimmed away, and each base is associated with a Phrap-derived quality score.
                                                                                                                                                                                                                                                     Center: NIH Intramural Sequencing Center

It currently consists of 32 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as * runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence * as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Center: Washington University Genome Sequencing Center

Specifically, the indicated order and orientation of each sequence contrig has been established using one or more of the following: read-pair data from individual subclones, overlaps with neighboring clones, alignment with available reference sequence (e.g., human), and/or confirmation by PCR testing. In addition, the sequence assembly is based on at least 8% average coverage in Q20 bases and has been reviewed to rule out gross misssemblies, the low-quality ends of sequence contigs have been trimmed away, and each base is associated with a Phrap-derived quality score.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Submitted (08-AUG-2002) NIH Intramural Sequencing Center, 8717
